# ADMISSION RATES—ALL CAUSES AND RESPIRATORY DISEASES

CONTINENTAL LIMITS OF THE UNITED STATES—1944 AND 1945

WEEKLY MORBIDITY REPORT

RESTRICTED

CURRENT TRENDS  
Week Ending 5 Jan 1946

The admission rate of 624 for All Causes shows a slight increase over that of the preceding week, but it is still below those for the two week previous. It compares favorably with the rate of 657 for the same period last year. This is the second week that the 9th District leads all the others for its high admission rate of (1,035). The lowest rate of (392) is again reported by the 7th District.

The admission rate for Respiratory Diseases is still on the decline, with a value of 239.8, almost 100 below what it was two weeks ago. However, it is higher than the rate of 220 reported a year ago for the same week. The highest rate comes from the 9th District (427.9) and the lowest is from the 7th District (124.3), but the rate for the former district is on the decline while that for the latter shows a rather sharp increase over the previous week.

INFLUENZA AND CATARRHAL FEVER, ACUTE. The combined admission rate for these diseases is still on the decrease, it being 179.0, as compared with 203.3 for the preceding week and 293.6 for the week ending 15 Dec 1945 when the peak of the season was reached. It is still appreciably higher than what it was a year ago for the same week 147.8. The highest rate (278.1) was reported by the 9th District, while the lowest rate (96.9) was reported by the 7th District. An increase was shown by the 4th, 7th, and 12th Districts, while a decrease was shown by all the others, the largest decrease being in the 1st and 5th Districts with a drop of (75.3) and (85.9) from the previous week, respectively.

PNEUMONIA--BRONCHO AND LOBAR. The rate of 2.6 for these diseases is almost the same as it was last week 2.5 and is lower than what it was for the week previous 3.3. Highest incidence was in the 3rd District with a rate of (9.3). No incidences were reported from the Potomac and Severn River Commands nor from the 13th District.

PNEUMONIA, ATYPICAL. This disease is still on the decline, with a rate of 2.5 as against 2.7 and 4.4 for the two preceding weeks. The highest rate of (9.2) was reported by the 6th District. There were no incidences in the 4th and 13th Districts.

TONSILLITIS AND PHARYNGITIS, ACUTE. There is a slight increase in the incidence of these diseases, with a rate of 55.2 as against 53.5 for the preceding week. That rate is, nevertheless, lower than the one of 68.8 reached the week previous and the rate of 66 reported a year ago for the same period. The highest incidence was reported by the 9th District, with a rate (143.0). The Potomac and Severn River Commands had the lowest incidence, with (22.2).

SCARLET FEVER. This disease continues its downward trend for most of the Naval Districts. The rate 8.5 compares favorably with that of 9.6 for the previous week, and with 14, which is the rate for the corresponding week a year ago. The highest rate of (41.0) was reported by the 9th District. No incidences were reported by the 6th, 7th, and 13th Districts.

CEREBROSPINAL FEVER, MENINGOCOCCIC. No incidences of this disease were reported during the week by any of the Naval Districts. The overall rate is, therefore, 0.

MEASLES. This disease continues its upward trend but its rate of increase is slowing down. The overall rate is 5.3 as against 5.0 for the preceding week and 4.6 for the week before. It still compares favorably with the rate of 8 reported a year ago for the week ending 6 January 1945. The highest rate of (16.3) came from the 9th District. The 1st, 6th, and 7th Districts and the Potomac and Severn River Commands reported no incidences.
